

Success Story: Pep Boys

migrate.
transform.
automate.

THE BACKGROUND

The client's old IT infrastructure was outdated and inefficient relative to top private cloud-based technology and third-party hosting solutions. The overhead associated with maintaining the support functions needed to trouble-shoot server malfunctions and upgrade server space was costly.

THE CHALLENGE

Pep Boys decided to optimize its IT infrastructure by implementing cloud-based hosting and computing solutions. Retaining a large amount of data relating to customer purchases and parts inventory, the company required a highly accurate and cost-effective system for data management. The main objective for the project was to consolidate the client's source servers into a private cloud environment.

THE SOLUTION

WSM partnered with a hosting provider to coordinate the migration of the client's servers. The migration was approached in phases which gave all stakeholders a chance to adjust during implementation. Since the project impacted the client on an enterprise level, a conscious effort was made to minimize downtime for the client's employees.

WSM migrated and consolidated dozens of source server instances to a private cloud environment while completing the move on-time and under budget.

About Pep Boys

A nationwide auto supply and maintenance chain, Pep Boys has over 800 locations in the U.S. and Puerto Rico. In addition, Pep Boys operates more than 8,300 service bays.

THE RESULTS

- ✓ Executed a successful migration and consolidation of dozens of source server instances
- ✓ Client experienced cost-savings almost immediately in capital expenditures, maintenance expenses, and benefits
- ✓ Migration completed on time and under budget
