

Success Story: Hostway

migrate.
transform.
automate.

THE CHALLENGE

Hosting companies like Hostway trust WSM to make sure they are meeting the security compliance requirements that keep their systems secure. Hostway was under a tight deadline to maintain their PCI compliance. If they failed to complete this on time, customers could have been impacted by limited options for paying for their services. Hostway was on a deadline to validate PCI compliance for their customer billing portals. This validation needed to come from an outside vendor with the experience and expertise to ensure compliance is met in a timely manner.

With our expertise and efficiency in mind, they trusted WSM to meet their deadline.

THE SOLUTION

To begin, WSM created a plan to leverage multiple certified security engineers to increase efficiency and meet the pressing client deadline.

Then, WSM began the PCI penetration test across 40 servers in 4 network VLANs.

When finished with the first round of testing, the initial reports were delivered on time, along with an estimate to remediate identified vulnerabilities.

In order to ensure that Hostway would meet compliance, all identified vulnerabilities were addressed and confirmed through repeated penetration testing.

About Hostway

Hostway has been a leader in cloud and managed hosting for 20 years, serving customers from small to mid-sized businesses to Fortune 500 companies. The company offers solutions to over 500,000 customers worldwide and is committed to exceptional customer service.

THE RESULTS

- ✓ Hostway was able to meet their tight deadline due to the quick planning and action of WSM.
- ✓ WSM was able to remediate all identified vulnerabilities to ensure a secure environment.
- ✓ Hostway met PCI compliance for their customer billing portals, which ensured no service disruption to customers.
